STOPit Notify

The Future of Safety Communications and Emergency Management is here through a powerful and practical emergency response solution.

- **All-in-one reporting**, mass communication, emergency management, and event resolution system
- Instant alert system for **Staff and Admins** that notifies your internal Y team
- Enabling faster response times and enhanced communication to **improve outcomes**

How it Works?

- **Users Request Help** and select a category of the incident and confirm address
- **Information is instantly sent** to internal/dynamic responders, including 911 if desired
- Preloaded **response plan actions** and notifications are delivered instantly
- **Teams communicate in real-time** to needs and identification
- **Individuals are accounted for** via response or geo-location tracking

STOPit Rescue

Rescue Can Improve Emergency Response

*Seconds save lives during an emergency. Instantly communicate when it matters most.*

YMCA Associations needed a physical panic button solution for the pool area, where smartphones are inaccessible. Ideally, they needed something that could activate in water. This is how STOPit Rescue was created as the first water-activated, internet-enabled panic button system.

This wearable device is industrial grade and can withstand heavy active use; designed as a robust, water-proof panic button system. Rescue is a long range, reliable, low power, real time monitored system with extremely flexible usability.

Reliable Panic Buttons

Monitor for battery level, signal strength, and other diagnostics all day long from the Rescue dashboard with realtime SMS and push notifications if a device goes offline.
Audible & Visual Alert Station

Alert stations are connected to the Internet by Ethernet and Cellular backup, and can be customized by volume, light usage, timing, fall monitoring sensitivity and more. The stations are fully integrated with STOPit Notify for notification of Emergencies via 5 different channels, and can monitor up to 12 wearable panic buttons simultaneously.

HELPme: A YMCA Staff Support Program

Now more than ever, our team members can benefit from a comprehensive organization wide support system that normalizes asking for help in a manner that decreases the stigma of doing so.

HELPme is designed to meet the needs of your YMCA teams by providing connections and access to resources for basic needs, 24/7 immediate Crisis Support and two-way anonymous communication with your assigned internal teams, all in a way that protects privacy and dignity.

How it Works?

Delivered on our highly configurable mobile platform, HELPme provides support and resources to your YMCA team members through a healing-centered interface. The HELPme app by STOPit Solutions highlights the importance of prevention and early intervention, asking for and receiving help, and the recognition of asking for help as a critical life skill.
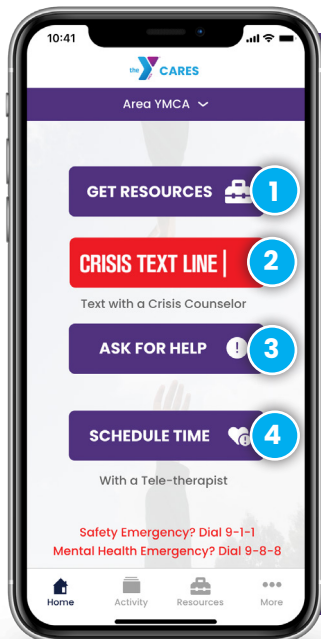

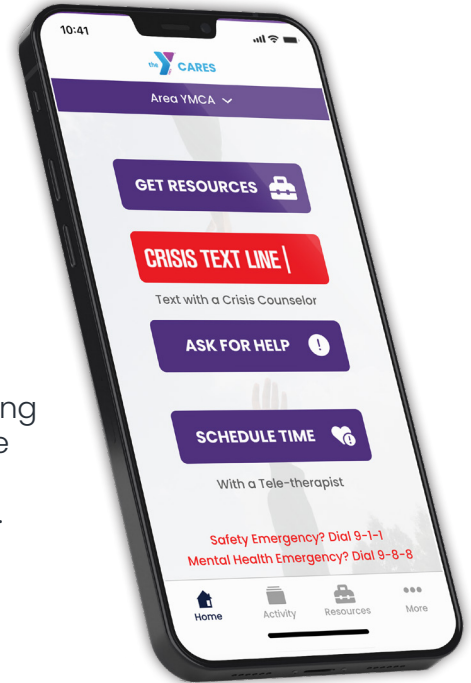

How it works? HELPme Provides 4 Ways to HELP based on user's level of comfort.

1. **Get Resources:** Connect to basic needs resources including food and housing
2. **Crisis Text Line:** Get immediate 24/7 Help from a Trained Crisis Counselor
3. **Ask for Help**: Communicate directly with assigned internal responder teams
4. **Schedule Time With a Tele-Therapist:** Access Self-directed Tele-therapy with licensed professionals (Optional)

Alternate Configurations Available

Alternate configurations are also available including our Anonymous Reporting System version (pictured right), which features the ability to anonymously report and manage incidents.
